

Golden Age Wisdom Admin Panel Guide

A complete, plain-language guide to running your website — creating and editing pages, managing meditations, events, testimonials, donations, volunteers, your team, and more.

NO CODING KNOWLEDGE REQUIRED

Prepared for the Golden Age Wisdom team
August 2026

27. Getting Help

1. Welcome — How to Use This Guide

This guide explains, screen by screen, how to use the Golden Age Wisdom **admin panel** — the private control room behind your public website. It is written for people who manage content day-to-day and have no coding background. You do not need to touch any code to do anything described in this guide.

Each part of the admin panel is covered in its own section: what it's for, every field you'll see on the screen, and step-by-step instructions for the most common tasks. Look out for these boxes throughout the guide:

NOTE

Background information that helps the instructions make sense.

TIP

A shortcut or best practice.

CAREFUL

Something that's easy to get wrong, or a limitation you should know about.

NEEDS A DEVELOPER

Something in the system that a non-technical admin cannot finish alone — flagged so you know when to call in developer help instead of hunting for a button that isn't there.

You don't need to read this front-to-back. Use the Contents page to jump straight to the module you need, or turn to the [Cheat Sheet](#) near the end for quick "how do I..." answers.

2. Getting Started

Logging in

The admin panel lives at a special web address — the same website address you already use, with `/admin` added to the end (for example, `https://your-website-address.com/admin`). Ask whoever set up your hosting for the exact address if you're not sure.

- 1 Go to the admin address in your web browser. You'll land on a login screen.
- 2 Enter the email address and password you were given.
- 3 Click **Log in**. You'll be taken straight to your Dashboard.

TIP

If you ever forget your password, ask a Super Admin or Admin to open your account under [Users & Practitioners](#) and set a new one for you — there's a one-click "Generate" button that creates a fresh password to hand to you.

Finding your way around

Once logged in, every screen shares the same layout:

- Sidebar (left)** Your main menu, grouped into **CMS**, **People**, **Engage**, and **Volunteers**, plus standalone links for Reports, Languages, and Settings. Click a group heading to expand or collapse it.
- Top bar** Shows a breadcrumb trail (e.g. "CMS > Pages > About") so you always know where you are, plus your account menu.
- Main area** The actual screen content — tables, forms, or cards depending on what you clicked.

Almost every list screen in the admin panel follows the same pattern, so once you've learned one, you've basically learned them all:

- A table or card grid of existing items, usually searchable and filterable.
- An **Add / New / Upload** button, usually top-right, to create a new one.
- A pencil icon to **edit** a row, and a trash icon to **delete** it.
- A colored pill showing its **status** (Draft, Published, Active, etc.).

Your role and what you can see

What you're allowed to do in the admin panel depends on your **role**. There are four built-in roles:

Role	What it can do
Super Admin	Everything, with no restrictions — including creating other admins and managing roles themselves.

Admin	Full control of content and the team (pages, media, members, announcements, broadcasts, QR codes, music, testimonials, contact info, donations, volunteers). Can see Settings and Reports, but can't change site-wide Settings or delete roles/other admins.
Content Manager	Full control of the public-facing content only — pages, media, languages, broadcasts, music, testimonials, contact info, donations, volunteers. No access to members, staff accounts, reports, or announcements.
Practitioner	A separate, simplified portal for their own assigned members only — see The Practitioner Portal .

NOTE

If a whole menu section is missing from your sidebar, it's not broken — your role simply doesn't include that section. If you can see a screen but a button is greyed out with a message like "You don't have permission to edit this," the same thing is happening at a smaller scale. Ask a Super Admin or Admin to adjust your role under [Roles & Permissions](#) if you need more access.

3. The Big Picture — How the Admin Connects to Your Website

Before diving into individual screens, it's worth understanding how the pieces fit together, because it will save you a lot of confusion later.

Your website is one continuous "app," not separate pages

Visitors land on a central hub with a golden chakra wheel, and clicking a chakra (or a menu link) swaps in a different view — About, Wisdom, Wellness, Meditate, Events, Mission, Contact, Volunteer, or Donate — without a full page reload. Behind the scenes, each of those views pulls its content from a matching **Page** in your admin panel's **CMS** → **Pages** screen. There are exactly ten of these built-in, wired-up pages:

Admin page (slug)	What visitors see it as
home	The golden chakra wheel hub / landing screen
about	About
wisdom	Wisdom
wellness	Wellness
meditate	Meditate / Practice
events	Events
mission	Mission
contact	Contact
volunteer	Volunteer
donate	Donate

These ten pages have a small padlock icon in the Pages list and cannot be deleted — but every word, image, and section inside them is fully yours to edit. This is what almost all day-to-day content editing looks like: opening one of these ten pages and changing its sections.

NEEDS A DEVELOPER

The admin panel includes a **"New page" wizard** that lets you create pages with any name and slug you like — and it genuinely saves that page, with all its content, into the system. However, the public website currently only knows how to display those same ten built-in views above. A brand-new page you create yourself (say, a page called "Winter Retreat") will **not automatically appear anywhere a visitor can find it** — there's no menu link and no chakra pointing to it yet. It will sit safely in the admin panel, fully written and ready, until a developer spends a small amount of time wiring up a new view and a navigation link for it. **In practice: use the wizard to prepare and draft new**

content, but tell your developer when you want a genuinely new page (not one of the ten above) to go live.

Draft vs. Published — your safety net

Almost everything in the admin panel — pages, sections, music tracks, events, testimonials, broadcasts — has a **Draft** and a **Published** (or Active/Inactive) state. While something is a Draft, only you can see it in the admin panel; visitors never do. This means you can safely prepare content, save it, walk away, and come back later without worrying about half-finished text going live. Nothing reaches the public site until you flip it to Published (or, for a whole page, until both the page itself and the individual section inside it are marked accordingly).

Multiple languages, side by side

Text content is written once per language, in tabs (English, Hindi, etc.) inside the same editing screen — see [Writing content in multiple languages](#). You only need to fill in the languages you actually want to support.

How to check your work

Wherever you see a **"View on site"** button (on the Pages list, a page's detail screen, or next to an individual section), clicking it opens the live public website in a new tab, scrolled to exactly what you were editing. Use this constantly — it's the fastest way to confirm a change looks right before telling anyone else about it.

4. Pages & Sections

/admin/cms/pages

cms.view / cms.create / cms.edit / cms.delete

This is the single most important screen in the whole system — it's where the actual words, images, and layout of your website live. A **Page** (About, Wellness, Mission, etc.) is really just a named container that holds one or more **Sections** stacked in order; each section is a self-contained block of content — a banner, a paragraph with an image, a grid of cards, and so on.

The Pages screen

This is a table listing every page in the system, with these columns:

- **Page name** and its **slug** (the short web-address name, e.g. `about`)
- A small padlock icon next to the ten built-in pages — this just means "can't be deleted," not "can't be edited"
- **Status** — Draft or Published
- Number of sections it contains
- When it was last edited

Click a page's name (or row) to open its detail screen. Click **New page** (top-right) to start the page-creation wizard (see [below](#)).

Editing a page

Opening a page shows two cards:

Page details

Just two fields: the page's **Title** and its **Status** (Draft/Published). Change either and click **Save details**. Setting a page to Draft takes the entire page down for visitors, even if individual sections inside it are Published.

Sections

A list of every section on this page, in the order they appear on the live site. From here you can:

- 1 **Reorder** — grab the handle on the left of a row (the six-dot grip icon) and drag it up or down. The public page updates to match this order.
- 2 **Add a section** — click **Add section**, pick one of the eleven section types (see the table below), and you'll be taken straight into that section's editor to fill it in.
- 3 **Edit a section** — click the pencil icon on any row to open its full editor.
- 4 **Preview it live** — click the eye icon on any active section to open the public site, scrolled to that exact block.
- 5 **Delete a section** — click the trash icon; you'll be asked to confirm.

CAREFUL

Deleting a section is immediate and permanent once confirmed — there's no "undo," so if you're unsure, change its status instead of deleting it (see below).

All eleven section types, explained

Every section has a **type**, chosen once when you add it, which decides which fields you'll see when you edit it. Here is every type, what it looks like to a visitor, and what you fill in:

Type	What visitors see	What you fill in
Hero	A big full-width banner, usually at the very top of a page, with a heading and a call-to-action button.	Eyebrow (small label above the heading), Heading, Subheading, Body text, a Call-to-action button (label + link), a background image for desktop <i>and</i> a separate one for mobile, plus fine controls for the decorative chakra-wheel graphic's position and size.
Content block	A classic text-and-image block — heading, a paragraph, a bulleted list, and an optional button, with the image on the left or right.	Eyebrow, Heading, Description (with basic text formatting), Bullet points (add/remove freely), an optional button (label + link), an Image, and layout controls (image position: left/right/top/bottom/centered; image shape: rectangle/circle/portrait; a scroll-in animation).
Card grid	A heading followed by a grid of small cards, each with an icon or image, a title, and a short body.	Heading, plus an editable list of cards — each with an icon (an emoji), a title, a body, an optional image, and its own layout settings.
Event list	A heading followed by your upcoming Live Sessions, listed automatically.	Just a Heading — the actual events come from the separate Live Sessions screen, not from typing them in here.
Contact form	The public "get in touch" form, with a heading, subheading, and a set of category checkboxes people pick from.	Heading, Subheading, and which categories (Meditation, Kundalini, Health, General) should appear as options on the form.
Media embed	A heading with either an embedded video or a single large image.	Heading, an optional Video URL (e.g. a YouTube link — leave blank to show an image instead), an Image, and layout/shape/animation settings.
Custom HTML	Anything at all — a raw block of web code.	Heading and a box of raw HTML. (This one is for developers — mistakes here can visibly break the page layout, so only Super Admins should normally touch it.

Quick answers	A heading followed by short question/answer style cards (e.g. "Best time? — Sunrise").	Heading, and a repeatable list of answer cards, each with a Label, a short Title/answer, a longer Body explanation, and an optional image.
Science panel	An explainer block pairing a body of text with a highlighted "recommendation" box and an optional list of related techniques.	Eyebrow, Heading, Body, a Recommendation heading + body, a list of other Techniques, a techniques note, and a closing note.
Deep cards	A toggle between "New to this" and "Seasoned" wording, revealing a grid of deeper-divide cards to more experienced visitors.	Labels and body text for both the "New" and "Seasoned" states, a repeatable list of deeper cards (icon, title, body, optional image), and a footer note.
Mission cosmology	An illustrated timeline of the four Yugas (ages), plus a highlighted "goal" statistic.	Eyebrow, Intro text, a repeatable list of Yuga entries (name, label, description, an image, and a checkbox marking which one is "where we are now"), an Outro, and the Goal percentage/caption/label.

NOTE

The **Content block**, **Card grid**, **Science panel**, **Deep cards**, and **Mission cosmology** types are what make up most of the About/Wisdom/Wellness/Meditate/Mission pages today. **Content block** in particular only renders correctly on the ten built-in pages listed earlier — it's tied to each page's chakra styling.

Fields every section shares

Whichever type you're editing, a few things behave the same way everywhere:

- **Images** — click into any image field to either paste a web address or click **Choose from library**, which opens the [Media Library](#) picker so you can reuse (or upload) a photo without leaving the section editor.
- **Animation** — a dropdown choosing how the block gently animates into view as a visitor scrolls past it (fade, slide, etc.). Purely decorative — safe to leave on the default.
- **Save draft vs. Publish** — the two buttons at the bottom of every section editor. **Save draft** stores your work without showing it to visitors yet; **Publish** saves it *and* makes it live immediately.
- **Missing translation warnings** — if a language tab is missing required text, its tab is marked so you can spot gaps at a glance (see [below](#)).

Creating a brand-new page

Click **New page** from the Pages list to open a four-step wizard:

- 1 **Basic info** — type a Title (a web-friendly Slug is suggested automatically from it, and you can edit it), and choose whether it should start as Draft or Published.
- 2 **Add sections** — tick as many of the eleven section types as you want; you can always add, remove, or reorder more later.
- 3 **Fill content** — a quick first pass at each section's Heading and Description in English; you'll fill in everything else (images, other languages, etc.) afterward in the full section editor.
- 4 **Review & publish** — a summary of everything you've set up. Click **Create page** to save it.

NEEDS A DEVELOPER

Remember: unless the slug you chose exactly matches one of the ten built-in ones, this new page will exist in the system, fully editable, but will not be reachable by any visitor until a developer adds it to the website's navigation. See [The Big Picture](#) for the full explanation.

Writing content in multiple languages

Inside a section editor, near the top of the card, you'll see a row of small flag tabs — one per language that's currently enabled (see [Languages](#)). Click a tab to switch which language you're typing into; every field below updates to show that language's text. There's no need to duplicate the whole section — one section holds all of its languages at once.

TIP

If a language tab shows a warning marker, it means one of that section type's "required" fields (usually the Heading) is still empty for that language. It's fine to leave secondary languages incomplete — the public site automatically falls back to the default language (usually English) for anything missing.

5. Media Library

/admin/cms/media

cms.view / cms.create / cms.edit / cms.delete

A shared photo-and-video library used everywhere else in the admin panel — section images, testimonial photos, donation QR codes, broadcast pictures, and more all pull from here. Uploading something to the Media Library does not, by itself, put it anywhere on the website; it becomes available to *pick* from inside those other screens.

Uploading

Drag files onto the upload area (or click to browse) — images and short videos are both supported, and you can drop several at once. Each file lands in whichever folder tab is currently selected.

Organizing

Use the folder tabs across the top (General, Home, About, Wisdom, Wellness, Meditate, Events, Mission, Contact) to filter the view and to sort new uploads. Hover any thumbnail to reveal three icons: **Copy URL**, **Edit** (rename, change its alt text or folder), and **Delete**.

TIP

Always fill in **Alt text** (a short description of the image) when editing a photo — it helps visually impaired visitors using screen readers, and helps search engines understand your images.

6. Music Library

/admin/cms/music

music.view / music.create / music.edit / music.delete

Your library of meditation, chanting, nature, sleep, and instrumental audio tracks.

Uploading a track

- 1 Click **Upload track**.
- 2 Drag in (or browse for) the audio file. As soon as it's added, a small player appears so you can preview it — and its length is detected automatically; you never need to type a duration in yourself.
- 3 Fill in a **Title** (required), the **Artist / instructor** name, pick a **Category** (meditation, chanting, nature, sleep, instrumental), and optionally a short **Description** and a piece of **Cover art**.
- 4 Set **Status** to Draft while you're still working on it, or Published once it's ready.

Reorder tracks with the up/down arrows — this controls the order they're offered in wherever a track can be picked (for example, the Meditation Presets screen).

CAREFUL

Publishing a track here does **not**, by itself, make it playable anywhere on the website. A track only becomes something a visitor can actually listen to once it's attached to a [Meditation Preset](#). Think of this screen as your raw audio pantry, and Meditation Presets as the menu that actually serves it.

7. Meditation Presets

</admin/cms/sit-presets>

[music.view](#) / [music.create](#) / [music.edit](#) / [music.delete](#)

These are the actual timer options a logged-in member sees and chooses from on the "Sit & Scribe" meditation timer — for example, "Silent Sit — 20 min" or "Chanting — 20 min."

Creating or editing a preset

- **Title** (required) — what the member sees on the button, e.g. "Silent Sit — 20 min."
- **Duration (minutes)** — a number from 1 to 180.
- **Music track** — pick from a dropdown of your *published* Music Library tracks, or choose "No music (silent)."
- **Status** — Draft or Published.

Reorder with the up/down arrows to control the order members see these options in.

NOTE

This is the one music-related screen that's confirmed to reach the public/member side of the site directly — it feeds the real meditation timer members use every day.

8. Live Sessions (Events)

</admin/cms/events>

[cms.view](#) / [cms.create](#) / [cms.edit](#) / [cms.delete](#)

Your schedule of group meditation live sessions. These automatically appear on the public Events page and on logged-in members' "Join live" widget.

Creating or editing a session

Title	Required.
Description	Optional.
Starts at	Required date and time.
Ends at	Optional — used so the site knows exactly when a session stops counting as "live."
Host practitioner	Optional dropdown, pulled from your team members whose role is Practitioner.
Location	Optional — a room name or "Online."
Join URL	Optional — the Zoom/Meet/streaming link the "Join" button on the site should send people to.
Published	A toggle — turn it off while you're still setting a session up, and on when it's ready to be seen.

TIP

A session shows as "live" to logged-in members starting ten minutes before its start time, right up until its end time — so it's worth always filling in "Ends at" rather than leaving it blank.

9. Testimonials

/admin/cms/testimonials

testimonials.view / testimonials.create / testimonials.edit / testimonials.delete

Quotes from members and practitioners used as social proof around the site.

Name	Required.
Role / description	Optional, e.g. "Practitioner, 2 years."
Quote	Required — the testimonial text itself.
Photo	Optional — falls back to a neat initials avatar if left blank.
Rating	Click a star, 1 to 5.
Status	Draft or Published.
Featured	A toggle — featured testimonials are highlighted specifically on the homepage, in addition to appearing on the general testimonials rail.

10. Contact Info

</admin/cms/contact>

[contact_channels.view](#) / [.create](#) / [.edit](#) / [.delete](#)

Every phone number, email, address, website link, or social link shown on your public Contact page.

Type	Phone, WhatsApp, Email, Address, Website, or Social link.
Label	Required — the heading shown above the value, e.g. "WhatsApp support."
Value	Required — the actual number, email, address, or URL.
Visible on public site	A toggle — switch off to temporarily hide an entry without losing it.

Use the up/down arrows to control display order.

CAREFUL

This is a completely separate list from the Social & Contact tab under [Settings](#). Only **this** screen's entries actually show up on your public Contact page today — see the note under Settings for details.

11. Donations

</admin/cms/donations>

[donations.view](#) / [.create](#) / [.edit](#) / [.delete](#)

One or more ways for visitors to donate — a bank transfer, a UPI ID, a PayPal link, and so on — each shown as its own card on the public Donate page.

Label	Required, e.g. "Bank Transfer — India."
Account holder	Optional.
Bank name / Account number / IFSC / Branch / SWIFT	All optional — fill in whichever apply.
UPI ID	Optional.
Payment link	Optional — a PayPal.me or Stripe-style link.
Notes	Optional text shown under the details.
QR code image	Optional upload.
Active	A toggle — inactive methods are hidden from the public page.

Every copyable field (account number, UPI ID, etc.) gets a small clipboard icon on the public page so visitors can copy it in one click. Only fields you actually fill in are shown — leaving the bank fields empty on a PayPal-only entry won't leave a row of blanks.

TIP

When an account changes, **deactivate** the old entry instead of deleting it — it keeps a record of what you used to accept without cluttering the live page.

12. Volunteers

`/admin/volunteers` and `/admin/volunteers/categories` `volunteers.*`

Applications

Every submission from the public "Become a volunteer" form lands here as a searchable, filterable table (Name, Email, Mobile, Category, Notes, Submitted date, Status). Click a row to open it, read the full message, change its **Status** (new → reviewing → contacted → approved → archived), or delete it.

Categories

The list of options a volunteer can pick from on the public application form. Each has just a **Name** and an **Active** toggle; use up/down arrows to reorder. If every category is switched off, the public form's submit button disables itself with a friendly "no categories available yet" message — so always keep at least one active.

13. Query Inbox

</admin/queries>

[members.view](#) / [members.edit](#) / [members.assign](#)

Every submission from the public Contact form lands here first, before anyone decides whether to turn it into a tracked **Member** (see next section).

Working a query

The table shows Name, Email, Mobile, Category, a preview of the Message, Submitted date, Status, and who it's Assigned to. Click a row to open the full detail, where you can:

- Read the complete message.
- **Assign** it to a practitioner.
- Change its **Status** (new → assigned → in progress → resolved → archived).
- Click **Convert to member** to promote this person into a fully tracked Member with their own journey/records history. This button permanently disables itself once used — a query can only be converted once.
- Click **Archive** as a shortcut for closing something out.

14. Members

/admin/members

members.view / .edit / .assign / .delete

A Member is a person being actively guided by a practitioner — created either by hand or, more commonly, by converting a Query.

The Members list

Name, Email, Phone, assigned Practitioner, Category, Joined date, and Status, all searchable. An **Export CSV** button downloads the whole list as a spreadsheet file. **New member** opens a short form (Name, Email, Phone, Category, Assigned practitioner) to add someone manually.

A member's profile

Click into any member to see and edit their Personal info (Name, Email, Phone, Status) and their Assignment (which practitioner is responsible for them), plus a summary card linking to their full **Records**.

Records (Journey)

A running history for this member: a persistent one-paragraph **Summary** you can update any time, and a chronological timeline where anyone with access can add either a **Quick note** or a paired **Question & Answer** entry. Every entry is stamped with who wrote it and when — useful as a shared memory across your whole team, since practitioners can also add to this same timeline from their own [portal](#).

NOTE

Deleting a member doesn't erase their history — it's a "soft delete" that just removes them from the active list while preserving their record.

15. Users & Practitioners

[/admin/users](#)

[users.view](#) / [.create](#) / [.edit](#) / [.delete](#)

Every staff login to the admin panel — admins, content managers, and practitioners alike — is managed here.

Creating or editing a user

Name	Required.
Email	Required — this is what they'll log in with.
Password	Click Generate for a random one, or leave blank when creating a user to have the system generate one automatically (you'll be shown the generated password once, so copy it to hand to the new user). Leave it blank when editing an existing user to keep their current password unchanged.
Role	Pick from any built-in or custom role.
Active	Toggle off to suspend someone's access without deleting their account.

If you set the Role to **Practitioner**, three extra fields appear: **Specialty**, **Bio**, and **Max member capacity** (used by Reports to show how full a practitioner's caseload is).

16. Roles & Permissions

`/admin/roles` `roles.view` / `.create` / `.edit` / `.delete`

Every button in the admin panel is gated by a specific permission, written as `section.action` — for example, `cms.edit` or `members.assign`. A Role is simply a named bundle of these permissions that you assign to a User.

Permission groups

Group	Covers
<code>cms</code>	Pages, Sections, Media, Live Sessions/Events
<code>music</code>	Music Library <i>and</i> Meditation Presets
<code>testimonials</code>	Testimonials
<code>contact_channels</code>	Contact Info
<code>donations</code>	Donations
<code>volunteers</code>	Volunteer categories & applications
<code>members</code>	Query Inbox & Members (view / edit / assign / delete)
<code>users</code>	Staff accounts
<code>roles</code>	Roles & Permissions itself
<code>announcements</code>	Internal staff announcements
<code>broadcast</code>	Public pop-ups / banners
<code>qrcode</code>	QR code generator
<code>languages</code>	Languages
<code>reports</code>	Reports (view only — no create/edit/delete exists for this group)
<code>settings</code>	Settings (view and edit only)

Editing built-in roles

You **can** change which permissions the built-in Admin, Content Manager, and Practitioner roles grant — for example, if you'd rather Content Managers not touch Donations, just untick those permissions from their role. What you **cannot** do is rename a built-in role, change its description, or delete it. **Super Admin** is the one exception even to that — it always has every permission and its permission list can't be edited at all, by design.

Creating a custom role

Click **New role**, give it a Name and optional Description, then tick exactly the permissions you want it to have from the grouped checklist. Custom roles can be freely renamed, re-described, or deleted later.

TIP

Click the eye icon on any role to see a clean, read-only breakdown of exactly what it grants and how many staff currently hold it — handy before changing or deleting one.

17. Announcements

</admin/announcements>

[announcements.view](#) / [.create](#) / [.edit](#) / [.delete](#)

One-way internal messages from you to your practitioners — policy reminders, updates, and so on. These are **not** shown to website visitors.

Title	Required.
Body	A rich-text box supporting bold, lists, etc.
Target	Everyone, a specific Role, or one specific person.
Type	Info, Warning, or Alert.
Priority	Normal or Urgent.

CAREFUL

Creating a brand-new announcement sends it immediately — there's no separate "save as draft then send later" step for a new one. Editing an announcement that's already been sent just updates its text without re-sending it.

Practitioners see these in a bell-icon notification drawer inside their own portal, with an unread count.

18. Broadcasts

</admin/broadcasts>

[broadcast.view](#) / [.create](#) / [.edit](#) / [.delete](#)

Unlike Announcements, Broadcasts *are* shown to website visitors — pop-ups, banners, and scrolling tickers.

Title	Required, for your own reference.
Type	Text banner, Popup card, Media popup, or News ticker.
Content	The message text (optional for an image-only media popup).
Image	For Popup card / Media popup only — paste a URL or choose from the Media Library.
CTA label / URL	An optional button.
Target pages	Tick which pages it should show on.
Audience	All visitors, new visitors only, or returning visitors only.
Delay (seconds)	How long to wait after the page loads before showing it.
Frequency	Every visit, once per session, once per day, or once ever (per visitor).
From / Until	The date range it should run for.
Status	Draft, Active, or Paused.

A live preview panel on the right of the form shows roughly what visitors will actually see as you type.

19. QR Codes

</admin/qr-codes>

[qrcode.view](#) / [.generate](#) / [.delete](#)

A tool for generating downloadable, scannable QR codes — for flyers, business cards, event signage, WiFi cards, and so on. This does not publish anything to your website by itself; it produces an image file for you to use elsewhere.

Generating one

Give it a Title, then pick a Type — each reveals its own fields:

Type	Fields
URL	A web address
Text	Any plain text
Email	Address, Subject, Body
Phone	Phone number
SMS	Phone number, Message
vCard	Name, Email, Phone, Address, Website (a scannable digital business card)
WiFi	Network name, Password, Encryption type
Location	Latitude, Longitude

Then choose a foreground/background color, size, error-correction level, and optionally a center logo. Click **Generate** — the code is saved to your list, where you can copy its value, download the image, or delete it later.

NOTE

QR codes can't be edited once created — if something's wrong, delete it and generate a new one.

20. Reports

/admin/reports

reports.view

Three tabs of read-only dashboards:

- **Overview** — contact submissions per month, and a breakdown by category.
- **Members & Practitioners** — members per practitioner, member status breakdown, new-vs-resolved trend, and a workload table showing each practitioner's caseload against their capacity.
- **Activity Log** — a searchable audit trail of every admin action taken across the whole system (who, what, when, from which device).

Export CSV downloads the Activity Log as a spreadsheet.

NEEDS A DEVELOPER

The **Export PDF** button is not yet functional — clicking it shows a message pointing you to Export CSV instead. Treat this as a known gap, not something you're doing wrong.

21. Languages

</admin/languages>

[languages.view](#) / [.create](#) / [.edit](#) / [.delete](#)

Controls which languages appear as tabs throughout the content editors (see [Writing content in multiple languages](#)) and on the public site's language switcher.

Name / Native name	Required — e.g. "Hindi" and "हिन्दी".
ISO code	Required, e.g. <code>hi</code> .
Direction	Left-to-right or right-to-left.
Enabled	Toggle — shows or hides its tab everywhere content is edited.

Click **Set default** on any language to make it the fallback used whenever a translation is missing. The current default language can't be deleted.

22. Settings

/admin/settings

settings.view / settings.edit

Seven tabs of site-wide configuration, each with its own independent Save button.

General

Site name, Tagline, Admin email, Timezone.

Social & Contact

YouTube, Instagram, Facebook, WhatsApp, Phone, Address.

Live Session Banner

A toggle plus banner text and a call-to-action for a site-wide "a session is live" strip.

Maintenance

A toggle that takes the entire public website down behind a "we'll be right back" message, plus that message's text and a list of IP addresses allowed to bypass it while you work.

Appearance

This tab only changes how **the admin panel itself** looks for you — Light/Dark/System theme, text size, font, and an accent color — it does not change how the public website looks. It also has Logo URL and Favicon URL fields (paste a Media Library link into these; there's no direct upload button here yet).

Email

SMTP server details for outgoing mail, a toggle to notify the admin email on new form submissions, and a **Send test email** button to confirm it's working.

Advanced

A single **Clear cache** button.

IMPORTANT — PLEASE READ

Of all seven tabs, only **Maintenance** currently has a real effect on what visitors see. The **General**, **Social & Contact**, and **Live Session Banner** tabs are saved correctly, but nothing on the live public website currently reads them back out — so editing your Instagram link or site tagline here will *not* change anything visitors see. If you want your social links to actually appear on the site, use the separate [Contact Info](#) screen instead — that one is genuinely connected to the public Contact page. Ask your developer if you'd like these Settings tabs wired up to the live site in future.

23. The Practitioner Portal

/admin/my-dashboard

Anyone whose account role is Practitioner gets a simplified, separate portal instead of the full admin panel, focused only on their own assigned members:

- **My Dashboard** — quick stats (total members, open queries, resolved this month) and a status breakdown chart.
- **My Members** — just the members assigned to this practitioner. Clicking one opens the same Summary + Journey timeline described under [Members](#), so a practitioner can add notes or record a Q&A without needing any of the broader admin permissions.
- **My Announcements** — a read-only feed of any Announcement sent to them (directly, to their role, or to everyone), automatically marked as read once viewed.

24. Quick Reference — What's Actually Live on the Website

A one-page sanity check for "if I change this, will visitors actually see it?"

Module	Reaches visitors?	Notes
Pages & Sections (the ten built-in pages)	Yes	Immediately, once Published.
Pages & Sections (a brand-new custom page)	No, not yet	Needs a developer to add a view + nav link.
Media Library	Indirectly	Only once picked/used elsewhere.
Music Library tracks	Indirectly	Only once attached to a Meditation Preset.
Meditation Presets	Yes	Powers the member Sit & Scribe timer directly.
Live Sessions (Events)	Yes	Public Events list + member "Join live."
Testimonials	Yes	General rail, plus a separate Featured set for the homepage.
Contact Info	Yes	Feeds the public Contact page directly.
Donations	Yes	Feeds the public Donate page directly.
Volunteer Categories & form	Yes	
Broadcasts	Yes	Pop-ups/banners/tickers on the live site.
Languages	Yes	Gates the language switcher and translation fallback.
Settings — Maintenance	Yes	The only fully-wired Settings tab.
Settings — General / Social & Contact / Live Session Banner	No, not yet	Saved, but not read by the public site today.
Reports, QR Codes, Roles, Users, Announcements	No	Internal admin tools only, by design.

25. Common Tasks — Cheat Sheet

I want to...	Go to...
Change wording or a photo on an existing page	CMS → Pages → open the page → open the section → edit → Publish
Add a new block of content to an existing page	CMS → Pages → open the page → Add section
Upload a photo to use somewhere	CMS → Media
Add a new guided meditation audio	CMS → Music → Upload track, then also add/update a Meditation Preset so members can find it
Schedule a new live meditation session	CMS → Live Sessions → New event
Add a member testimonial	CMS → Testimonials → New testimonial
Update a phone number or social link people actually see	CMS → Contact Info (not Settings)
Add or update a bank/UPI/PayPal donation option	CMS → Donations
Respond to someone who filled in the contact form	People → Queries
Follow up on a person you're actively guiding	People → Members → open their profile → Records
Add a new staff member or practitioner login	People → Users → New user
Change what a role is allowed to do	People → Roles
Send a reminder to your practitioners	Engage → Announcements
Show visitors a pop-up or banner	Engage → Broadcasts
Make a QR code for a flyer	Engage → QR Codes
Turn the whole website off temporarily	Settings → Maintenance
Add a new language	Languages → New language, then fill in translations page-by-page

26. Glossary of Terms

Page	One of the named containers in CMS → Pages (e.g. About, Wellness) made up of one or more Sections.
Section	One content block inside a Page — has a Type (Hero, Content block, etc.) that decides its fields.
Slug	The short, web-safe internal name for a page (e.g. <code>about</code>), separate from its human-readable Title.
Draft / Published	Draft = only admins can see it. Published = live for visitors.
Active / Inactive (or Paused)	The equivalent of Draft/Published used on things that aren't Pages — donation methods, broadcasts, categories, etc.
Built-in page	One of the ten pages the public website already knows how to display — shown with a padlock icon, cannot be deleted, but is fully editable.
Role	A named bundle of permissions (e.g. "Content Manager") assigned to a staff account.
Permission	A single specific ability, written as <code>group.action</code> (e.g. <code>cms.edit</code>).
Query	A raw submission from the public Contact form, before it's turned into a Member.
Member	A person being actively guided by a practitioner, with their own history/journey timeline.
Practitioner	A staff role with its own simplified portal, scoped to their own assigned members.
Journey / Records	The running note/timeline history kept against a Member.
Broadcast	A pop-up, banner, or ticker shown to public website visitors.
Announcement	An internal, staff-only message — not shown to visitors.
Media Library	The shared pool of uploaded photos/videos other screens pick images from.

27. Getting Help

This guide covers everything a content editor, admin, or practitioner needs day-to-day without touching any code. A few things in the system are explicitly flagged throughout this guide as needing a developer instead — reaching for those first will save you time:

- Making a genuinely new page (outside the ten built-in ones) reachable by visitors.
- Wiring the Settings → General / Social & Contact / Live Session Banner tabs into the live site.
- Fixing or building the Reports → Export PDF button.
- Adding direct file upload for the Settings → Appearance logo/favicon fields.
- Anything involving the Custom HTML section type.

For everything else in this guide — editing pages, managing your team, running reports, sending broadcasts — you have everything you need right inside the admin panel. When in doubt, remember the golden rule: **save as a draft, preview with "View on site," and only publish once it looks right.**
